Work Experiences

Internship at AVK - UX designer & game developer.

- Redesigned company website domains to align with modern standards using the SCRUM creation process.
- Utilized backend tools within the company's software ecosystem to implement the new UX layout
- Designed an educational game to help users improve prompting skills for large language models in a gamified learning environment.
- Collaborated in team-based projects involving marketing campaigns and website development.

Internship at Lectoraat IxD mindlabs - Creating virtual humans

- Pitched and set up my own project within the lectoraat to create reactive virtual humans that, through sensors have a meaningful interaction with the users.
- Animated, rigged metahuman characters and sequences within the levels in Unreal Engine 5, to display in a Holobox
- Created lots of interactive user tests to conduct research
